Procurement Benchmarking

- ✓ Benchmarking against peer group performance
- ✓ Benchmarking towards Market Indexes

sievo.com

Predict Future Profitability

Overview

Sievo Spend Forecasting is a solution used to create a forward-looking view on spend, prices, volumes and on procurement's impact on profitability. Eliminating the use of Excel spreadsheets, the solution automates data integration from any source directly into the system and enables users to manipulate forecasts directly in the solution for forecasting, analysis and reporting.

"We needed a tool that we could use cross-functionally, so it would serve the purpose of meeting the business needs, but also fluent, dynamic, and can be used between procurement and finance. We needed something that we could get into more value-added analysis versus just the number-crunching. Sievo helped us realize those goals with their Spend Forecasting solution."

Michelle Palmquist

Senior Finance Director,
Global Procurement and Contract Manufacturing

Sievo's Critical Success Factors

- ✓ Global design and scalability
- ✓ Automated data integration/ collection, consolidation and calculations
- ✓ Model flexibility for future changes
- ✓ Intuitive and user-friendly for cross-functional use
- ✓ Optimal system performance

Core Benefits

Predict future profitability

Translate procurement price and volume forecasts into profitability estimates

Integrate any data source

Get ahead of competition by collecting all your internal and external data sources to react faster to market changes

Tame Purchase Price Variance

Control budgeted vs. actual PPV across your whole organization from every direct material to business unit

Root-cause analysis

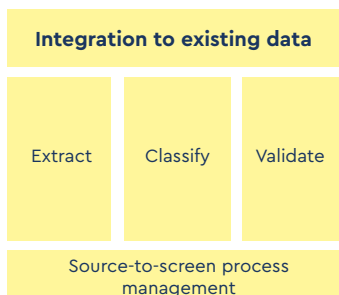

Understand drivers of cost changes- price, volume, commodities

Key Features

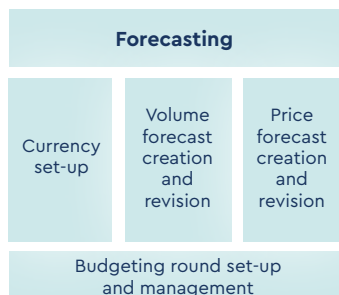

- ✓ Capture internal and external data
- ✓ Advanced algorithms to create automated forecasts
- ✓ Facilitate forecast validation, editing and correction process through user-friendly interfaces
- ✓ Role-based user model enabling separation of forecast input responsibilities
- ✓ Automated analytics to isolate different change drivers e.g. volume, price, currency and mix
- ✓ Visual analytical UI providing overview by category, region and business and allowing drill-down to SKU level

Exemplary forecasting process for direct materials
